CABLE PROTECTORS

Get the vast amount of cables to your FOH on big events with the help of our cable bridges. Designed for use in high traffic areas, these cable protectors prevent your cables from being run over by pedestrians or vehicles while also protecting against trip hazards. Two versions are available, a budget friendly rubber one and a stronger version made out of Polyurethane.

KEY FEATURES

Sturdy construction

Our Polyurethane cable protectors feature a PU base and lid, making them lighter but more resilient against frequent impact and extreme weather conditions.

Interlocking system

Using their T-shaped connectors, the cable bridges can be easily connected to each other to form a continuous ramped protector.

Non-slip textured surface

The five bar tread, slip-resistant surface ensures an optimal traction for both pedestrians and vehicles.
